

Cardite ProVibe™

Mild Alkaline Vibratory & De-Burring Compound

DESCRIPTION:

Cardite ProVibe is a mild alkaline cleaning and de-burring compound recommended for use on all ferrous and non-ferrous metals. **Cardite ProVibe** is effective at removing all types of oily soils, vegetable oils, animal fats, petroleum products and many other common industrial soils and particulates. The creative chemistry and mild pH formula provides a no fume or flash point solution, making **Cardite ProVibe** user and environmental friendly.

TYPICAL APPLICATIONS:

Cardite ProVibe is especially recommended for use in vibratory and de-burring applications, and is safe on all metals and media.

PERFORMANCE PROPERTIES:

Cardite ProVibe contains controlled foaming detergents, chelating and sequestering agents which provide quick penetration and dispersion, all which provide optimal finishing as well as keeping media clean and efficient. **Cardite ProVibe** has built in corrosion inhibitors as well as yellow metal inhibitors which eliminate staining and provide excellent rust inhibiting properties.

RECOMMENDED USE DILUTIONS:

Dilute **Cardite ProVibe** with water to suit the job. Typical concentrations vary from 1% up to 4% depending on the part, contaminant, finish required, media selected, and corrosion inhibition required.
